The new entry is well equipped to run a variety of 2D and 3D arcade games; meanwhile, the new controller needs to be bound to the Mi Mix 2's screen so that the upcoming apps will be displayed in the right way.

1 day, 3 hour ago. Samsung is reportedly launching a new smartphone that will use the Korean brand's in-house Exynos 9825 chipset. Exynos 9825 is a 14nm processor and the most powerful processor to date.

9 days ago. There is no question that Samsung will always be the main company to manufacture the Galaxy S series. But some people may say that this is not the way to make profits because the revenue model of this company is based on Samsung brand and not smartphones itself.

12 days ago. That's not all: Thanks to the Exynos 9825 chipset, the Galaxy Note 9 will be able to run all the gaming titles you've got on your Android phone. While the model's not available in the market yet, some rumors say that the Note 9 will be able to run Android games better than the S Pen-less Galaxy S9.

1 week, 1 hour ago. The Galaxy Note 9 will be the first Android phone to use Samsung's own Exynos 9825 chipset. The Exynos 9825 features a new 12-core graphics processor as well as an AI chip that will handle advanced machine learning.

2 weeks, 8 days ago. Exynos is the name of Samsung's in-house chipset for mobile phones, and with the launch of the S9 and S9+, it has finally been made official. With the new chipset, the phone will have a lot of improvements over the Exynos 8895, which is the chipset used in the Exynos 8880, Exynos 8890, and the Exynos 8895+ chipset.
